APPLICATION 4: VALIDITY OF CAUSAL STRUCTURE 147. tant preliminary step in the analysis of full latent variable models is to test first for the validity of the measurement model before making any attempt to evaluate the structural model. Sat, 09 Feb 2019 16:32:00 GMT Testing for the Validity of a Causal Structure - SPSS - Adding means to a structural equation model is relatively straightforward. In the data, we must include the means with the covariance matrix or provide raw data. In the model, we must include an intercept term in the regressions for the observed variables, and estimate factor means. Components of a general structural equation model are the measurement model and the structural model. The measurement model prescribes latent variables, e.g., confirmatory factor analysis. Mon, 18 Feb 2019 08:00:00 GMT The Basics of Structural Equation Modeling - Lex Jansen - The central idea of structural equation modeling is the study of causal relationship between variables. For example, you have an X and an Y variable. X is the cause of Y, or doing X results in Y. To give a more realistic example: eating more vegetables (X) brings down your cholesterol level (Y).
